SUMMARY Master of Computer Science graduate specializing in Generative AI, Computer Vision, and AI Security. Builds production ML systems with the domain experts who use them, from workflow discovery to shipped pipeline. U.S. citizen, clearance-eligible. Seeking an ML Engineer role.

EDUCATION

Texas A&M University, College Station, Texas
Master of Computer Science, May 2026
4.00 GPA, Coursework in AI / ML
Bachelor of Science in Computer Science, May 2025
3.98 GPA, Minor in Mathematics

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript, SQL
Frameworks: PyTorch, TensorFlow, scikit-learn, Pandas, NumPy, Hugging Face
Tools & Certifications: AWS, Docker, Git, Linux, Agentic Coding Tools, CompTIA Security+
GenAI & CV: RAG, LLMs, Agentic Tool Use, MCP, LoRA, Diffusion, Vision-Language Models

WORK EXPERIENCE

AI Engineer May 2026 – Present
Independent Consultant: Gloxco, ETEC, Gtek Communications, Tarpon Specialty Services
- Replaced hand-keyed field reports with vision extraction, built alongside technicians
- Built assistant that researches business questions across live sales and inventory data
- Automated weekly invoicing as MCP connector + skill; bookkeeper runs it unaided
- Built shipping-cost dashboard in production; surfaced $7K/yr avoidable carrier fees

E-Commerce Operations Intern Summers 2022 – 2025
Gloxco, Alice, Texas
- Built Python automation to process shipment tracking data across 5 carriers
- Deployed real-time inventory dashboard for 1,400+ SKU warehouse operations

IT Project Intern May 2025 – July 2025
City of Portland, Portland, Texas
- Deployed IDS across 5 municipal networks for real-time threat monitoring
- Investigated and remediated security incidents including phishing-driven malware

PROJECTS

Sparse-View 3D Reconstruction with Generative Repair
- Designed 3D reconstruction pipeline with 3D Gaussian Splatting and diffusion-based repair
- Fine-tuned ControlNet + LoRA across 1.4B-param U-Net for scene-specific generation
- Improved Peak Signal-to-Noise Ratio (PSNR) by 41% over baseline sparse reconstruction

Transform-Dependent Attacks via Diffusion Models (AI Security Research)
- Built diffusion-based adversarial attack via latent-space optimization w/ DDIM inversion
- Implemented Expectation-over-Transformations framework with differentiable transforms
- Achieved 72% targeted attack success at 0.132 LPIPS, matching SOTA diffusion attacks

Privacy Policy Classification with Retrieval-Augmented LLMs
- Built RAG pipeline with MPNet embeddings, ChromaDB vector store, OpenAI GPT-3.5 API
- Benchmarked multi-label classifier across 12 categories on 4k+ OPP-115 segments
- Co-authored resulting paper on retrieval-augmented policy classification

ACTIVITIES

Corps of Cadets, Fightin' Texas Aggie Band Aug 2021 – May 2025
- Training Officer: led 10-person team responsible for wellness of a 60+ member unit
- Scholastics Sergeant: mentored cadets to 3.4 unit-wide GPA & Most Outstanding Outfit

OR Simpson Honor Society Aug 2022 – May 2025
Honor Society serving Cadets through tutoring and mentorship
